

How MNSPECT Uses Coolpo to Make Online Meetings with Customers More Effective

"We purchased the Coolpo AI Huddle PANA camera to be our primary web meeting camera in our conference room so our clients can view all attendees sitting around the table." Ty told us.

Prior to MNSPECT's purchase of the Coolpo AI Huddle PANA camera, they would set up a lap top computer at the end of their conference room table, it's not easy to see or hear person sit far away from laptop, nor can they tell exactly who is speaking. Meetings are constantly disturbed by asking 'who is speaking?', 'Sorry, I cannot hear you.' Not only it's annoying, but also not professional for a conference meeting with their clients. Since the purchase of the Coolpo AI Huddle PANA camera, they now place the camera in the center of the table and their customers can see all of their staff members in attendance.

"The Coolpo AI Huddle PANA camera has provided the solution to better meeting experience for our customers. Our customers can clearly view the staff members as they contribute to topic at hand which provides an atmosphere meeting within the same room."

"We have received favorable feedback from our customers with comments that they enjoyed the meeting experience. The Coolpo AI Huddle PANA camera is easy to set up and use. Our staff has easily adapted to using it. Overall, we are pleased with the performance of the Coolpo AI Huddle PANA."

Ty Turnquist
Operations Director at MNSPECT

Based in Minnesota, MNSPECT dedicated for comprehensive Designated Building Official and as-needed Building Safety services since 1987. They are on the mission to provide cost-effective solutions that result in high-quality services for communities, residents, and contractors, with a positive impact on community budgets.
